Amendments to the Specification

The Paragraph beginning at Page 8, lines 11-24, is to be amended as follows:

As illustrated in Figure 1, a printed netpage 1 can represent a interactive form which can beis filled in by the user both physically, on the printed page. This physical interaction with the page is communicated electronically by the pen, and "electronically", via communication between the pen and the netpage system. The example shows a "Request" form containing name and address fields and a submit button. The netpage consists of graphic data 2 printed using visible ink, and coded data 3 printed as a collection of tags 4 using invisible ink. The corresponding page description 5, stored on the netpage network, describes the individual elements of the netpage. In particular it describes the type and spatial extent (zone) of each interactive element (i.e. text field or button in the example), to allow the netpage system to correctly interpret input via the netpage. The submit button 6, for example, has a zone 7 which corresponds to the spatial extent of the corresponding graphic 8.
